ABOUT ME

I'm a JavaScript developer with 3 year experience in creating web applications. As a full-stack developer my fields of expertise are MERN stack and JAM stack applications as well as static site generators like GatsbyJS. When implementing UI design I rely on Bootstrap, MaterialUI, SemanticUI and SCSS. Writing APIs, cloud functions and methods to connect front-ends to real world data or micro-services is also a skill of mine, as well as testing complicated functions for edge-cases.

EXPERIENCE

JAVASCRIPT DEVELOPER

FREELANCE | JAN.2018 - CURRENT | ONLINE

Creating personal websites and web applications for clients using MERN stack or JAM stack approach. Developing, testing and deploying React applications.

- Creating appointment based payment application for a personal coach integrating Stripe payments and google Calendar APIs
- Creating a digital photo delivery app with user authentication, while implementing Cloudinary api for photo storage and firebase as hosting and user authentication solution
- Building websites from ground up
- Implementing UI designs using CSS frameworks in addition to own CSS
- Implementing admin panel for clients to use
- Reducing load times, Time to Interactive, First Meaningful Paint by code-splitting, lazy-loading and rendering only components in viewport
- Making websites mobile friendly
- Implementing latest accessibility standards
- Designing databases and data schemas critical for web application
